ELEMENT TASK DESCRIPTION</b><br><br>WBS GRAPHIC<br><br>See attached.<br><br>INTRODUCTION<br><br>During the Cold War, the Portsmouth Gaseous Diffusion Plant (PORTS) was constructed to enrich uranium in support of both government and private sector programs. The plant is currently in Cold Standby under a lease agreement with the United States Enrichment Corporation (USEC) which produced Low Enriched Uranium for commercial applications. Waste Management will be managing "legacy waste" (generated prior to FY03) streams for characterization, treatment, storage, and disposal in compliance with DOE Orders. In addition as a result of environmental releases from past production activities, and environmental restoration projects conducted by the Portsmouth Remedial Action Project in the period between FY94-FY99, these waste streams were received for characterization, treatment, storage, and disposal by Waste Management.<br><br>LOGIC RELATIONSHIPS<br><br>This subproject only contains intra-subproject ties between activities and does not have any predecessor or successor relationships with other level six WBS elements or national windows or other regulatory milestones. Disposal of Low Level Waste will require an offsite disposal contractor(Envirocare or NTS) as an External Ties..<br><br>SCOPE DESCRIPTION<br><br>PERFORMANCE METRICS/INDICATORS<br>Treat 1,024 Cuft by 09/30/2003<br>Dispose 59,854 Cuft by 09/30/2003<br><br>PAST AND FUTURE ACCOMPLISHMENTS<br><br>PAST ACCOMPLISHMENT PRIOR TO FY 2003:<br><br>Completed On-site Wastewater Treatment: 15,000 pounds (FY01)<br>Completed characterization profiles on five LLW streams (FY01)<br>Completed disposition of X-616 Sludge (Remaining Boxes) (FY01)<br>Completed disposition of X-744Y Burnables - approximately 583 boxes (FY01)<br>Completed characterization profiles for seventeen LLW streams (FY02)<br>Completed treatment of these two LLW waste streams (FY02)<br>Completed disposal of twenty-four LLW waste streams (FY02)<br>68-55 gallons drums currently on the X-7745R Pad will be repackaged and stored in covered or indoor facilities until they are characterized and disposed in outyears. To accomplish this, an Integrated Safety Management System (ISMS), based on DOE's ISMS has been implemented that incorporates the five core functions and is based on the seven guiding principles. The objective of ISMS is to systematically integrate safety and environmental protection into the planning and execution of all work activities. The term safety encompasses Nuclear Safety, Industrial Safety, Industrial Hygiene, Occupational Health, Health Physics, and environmental issues. ISMS requirements flow-down to Bechtel Jacobs Company subcontractors. The Five Core Functions are: (1) Define the scope of work, (2) Analyze hazards, (3) Develop and implement hazard controls, (4) Perform work within controls, and (5) Provide feedback and continuous improvement. The Seven Guiding Principles are (1) Line Management Responsibility for Safety, (2) Clear Roles and Responsibilities, (3) Competence commensurate with responsibility, (4) Balanced Priorities, (5) Identification of Safety Standards and Requirements, (6) Hazard Control Tailored to Work Being Performed, and (7) Operations Authorization.<br><br>FY 2003 - 2006 Scope (Inventory of Streams, Containers and Volumes attached to end of Scope information)<br><br>05.03.01.01.01 LLW Waste Treatment<br><br>NER-1 Non-Regulated Ground and Related Water - Liquids will be decanted into tanks, and treated at on-site treatment facilities.
